Notification

This handbook corresponds with the unit version of 12/2004. The company Digitronic Automationsanlagen GmbH reserves the right to implement changes that result in an improvement of the quality and the functions of the device at any time and without any announcements.

This instructions manual was created with a maximum of care, but mistakes are not out of the question. We are thankful for any comments, regarding possible mistakes in the instruction manual.

UP-date

You can also obtain this instruction manual on the Internet at <http://www.digitronic.com> in the latest version as PDF file.

Qualified personal only

Commissioning and operation of the device may only be carried out by qualified personal. Qualified personal are persons, authorized with commissioning, grounding and labeling devices, systems and electrical circuits according to the applicable standards of security

Liability

(1) The salesperson is liable for any damages for which he or the rightful owner is responsible up to the amount of the actual salesprice. Liability concerning missed profits, failed-to-appear savings, indirect damages and consequential damage is excluded.

(2) The liability restrictions above are not valid concerning assured characteristics and damages, which are caused by intention or coarse negligence.

Protection

The device AAG66111 and this instruction manual are protected by copyright. All rights are reserved. Neither the device AAG66111, nor this document may be copied as a whole or partially, photocopied, reproduced, translated or transferred to electronic media of any kind or into machine readable format without prior written permission by the company Digitronic Automationsanlagen GmbH.

Note: The products of Digitronic are so well constructed that they will not be effected by the millenium.

Note: This device fulfills the following norms according to electromagneticalcompatibility: EN 55011, EN 55022, EN 55024 Teil 2, EN 50082 Teil 2, ENV 50140, VDE 0843 Teil 2, VDE 0843 Teil 4, VDE 0871, VDE 0875 Teil 3 ("N"), VDE 0875 Teil 11, VDE 0877 Teil 2, IEC 801 Teil 3, IEC 801 Teil 2, IEC 801 Teil 4, IEC 801 Teil 5.

1. The absolute multiturn rotation encoder AAG66111

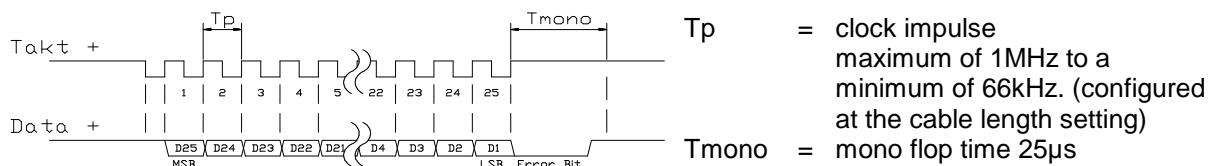

The AAG66111 is the replacement of the no longer usable AAG626 encoder. Turns with a resolution of 4096 impulse and with 4096 rotations can be measured by the absolute multiturn rotation encoder and can be connected through the serial synchronized data exchange to the camswitchunits of the CamCon series.

1.1. Survey of the components of the AAG66111 multturn rotation encoder

1.2. The SSI interface

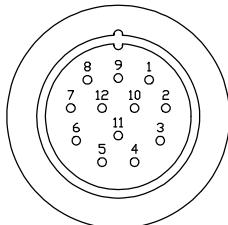

The SSI interface is a common interface for absolute single and multturn encoders. The CamCon supplies the measuring system with 24Volt via this interface. To read the data, CamCon sends a clock signal with an RS422 level to the encoder. The encoder answers synchronously with the output (data) of the position in Gray code. The frequency of the clock signal depends on the length of the cable connecting encoder and CamCon. This value can be configured at the CamCon. The data protocol corresponds with the Stegmann SSI Norm.

1.3. The terminal assignment of the AAG66111 rotation encoder

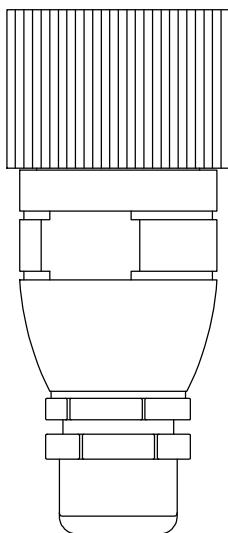

Connection plug Type: AAG66111/ST

Binder Series 623
soldering side

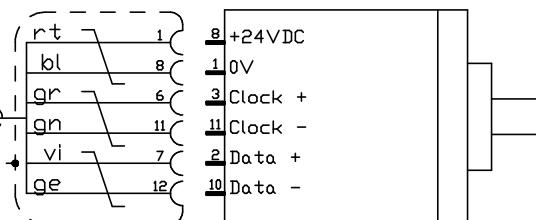

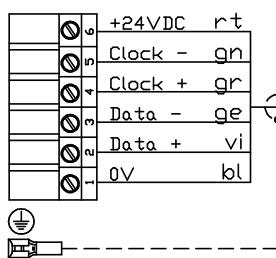

Attention: The order of the numbering of the connector plug may differ from manufacturer to manufacturer. You can only connect a plug with a different order, if you keep the displayed attachment allocation in mind. The location of the pins has to match the corresponding functions at the device. This booklet uses a plug of the Binder 623 series.

Attention: Connecting wrong poles of the connection cables can damage or destroy the CamCon or the encoder.

The connection plug of the
SSI interface
is dependant of the type of the CamCon.
Consult the handbook
of your CamCon.

connection plug
Type: AAG66111/ST
Encoder
Type: AAG66111
Binder series 623

max. cable lenght: 300m
cable type: LIYCY 4x2x0.25 + 2x0.5 + shield

Please note: Only use a sheathed pairwise connection cable. Do not put the cable near power current wires. If possible, put the screening up at both sides.

Order.nmb.: K_Ky/S-XX meter

yy = CamCon Type. e.g. 16,33,40,50,60,90,115 or 300
XX = length of the cable in meters

2. Installation and bringing into service

Rotation encoders are precision measuring units and therefore have to be handled as such. Please regard the following installation instructions before bringing the rotation encoder into service.

- When installing the rotation encoder, pay attention to the slight angular and radial misalignment. (See technical data of the to be used couplings). Avoid blows towards the shaft and regard the values concerning the shaft loads, which are listed on the data sheet.
- Use flexible couplings ! The kind of couplings is determined by the speed, the torque, and the to be by-passed angular and radial misalignment.
- Connect the rotation encoder to the corresponding terminal assignment. See to it, that the operating voltage recommended on the type plaque is installed.
- The plug should not be connected or disconnected when under voltage.
- If the rotation encoder, even if correctly installed, does not function properly, intermittent faults can be the cause of that. Such faults are due to power supply switchings, pulse mode controllers or motors etc. Such faults can be reduced through proper protection facilities and through using cables with a better shielding or an appropriate filtering network.
- Should the occasion arise, protect the rotation encoder against environmental damage. (solid particle impact, water spray ect.).
If any interventions are carried out by unauthorized personnel the factory guarantee becomes invalidated !

Please review the wiring of the unit before switching it on and then engage the supply voltage of the CamCon.

2.1. Technical data of the AAG66111 multturn rotation encoder

Power supply.....	24VDC +20%
Power consumption.....	up to 3.7 watt
Resolution	4096 impulse / turn x 4096 rotations (max. 16777216 impulse).
Stepfrequency	maximal 100 kHz
Measuringuncertainty.....	10^{-3} rad
Data output.....	synchronos serial (SSI), graycode
Monofloptime.....	15..25 μ s
Cablelength between rotation encoder and CamCon.....	300 meter max.

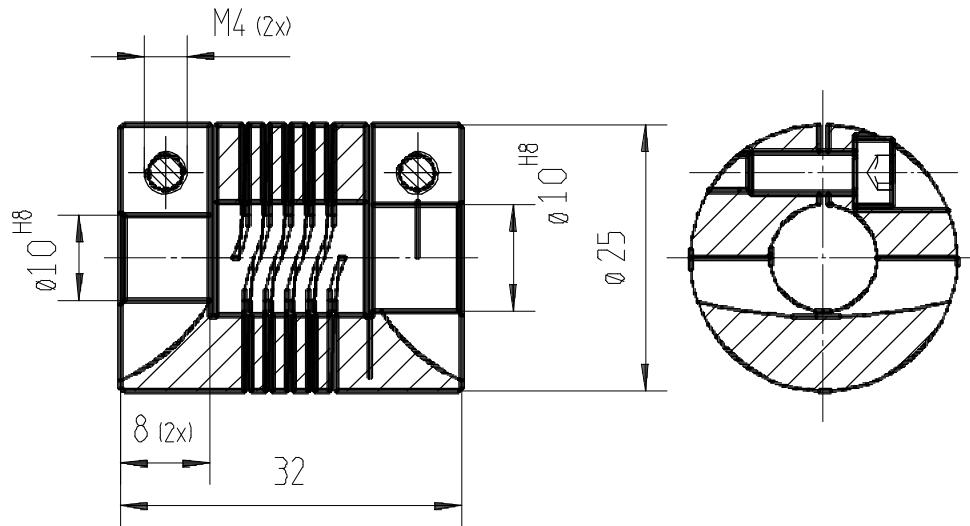

Mechanical characteristics

Valid torque	maximum 6000 min^{-1}
Angular acceleration of the rotor	10^5 rad s^{-2}
Inertia of the rotor.....	45 gcm^2
Start-up torque at 25°C	maximal 1 Ncm
Shaft load (at the shaft-end)	axial 50 N / radial 200 N
Ball bearing lifetime with 10 N axially and 10 N radialet load, at 3000 min^{-1}	25000 h
Vibration (sine form) 100Hz	100 ms^{-2}
Impact radially on the flange within 10 ms	300 ms^{-2}
Protection	IP65
Relative dampeness.....	90 %
Operating temperature.....	0..+60°
Weight.....	ca. 400 g.

3. The shaft couplings

Encoders are precision measuring units and therefore have to be kept apart from the vibrations and tremors, as well as the from the misalignment of the machine. To part the encoder from these influences use the flexible shaft couplings.

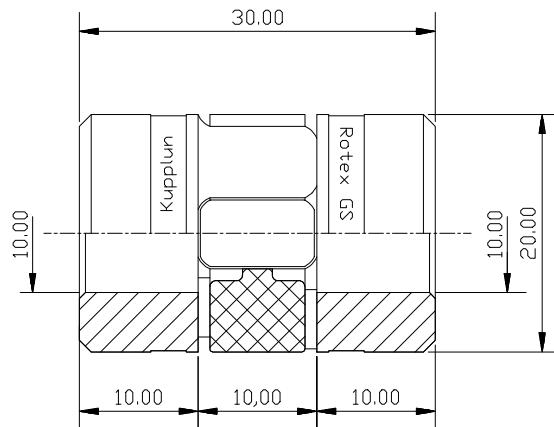

3.1. Wendel - shaft couplings type: WK/A/10-10

3.1.1. Technical data

Outer diameter	25 mm
Length	32 mm
Clamp-screw	M4
Nominal torsial moment	120 Ncm
Acceptable radial shift	+/- 0.35 mm
Acceptable axial shift	+/- 0.5 mm
Acceptable angle-shift.....	+/- 4 degree
Torsions strength	16 Nm/rad
Acceptable rotation speed.....	6000 U/min
Weight.....	ca. 34g

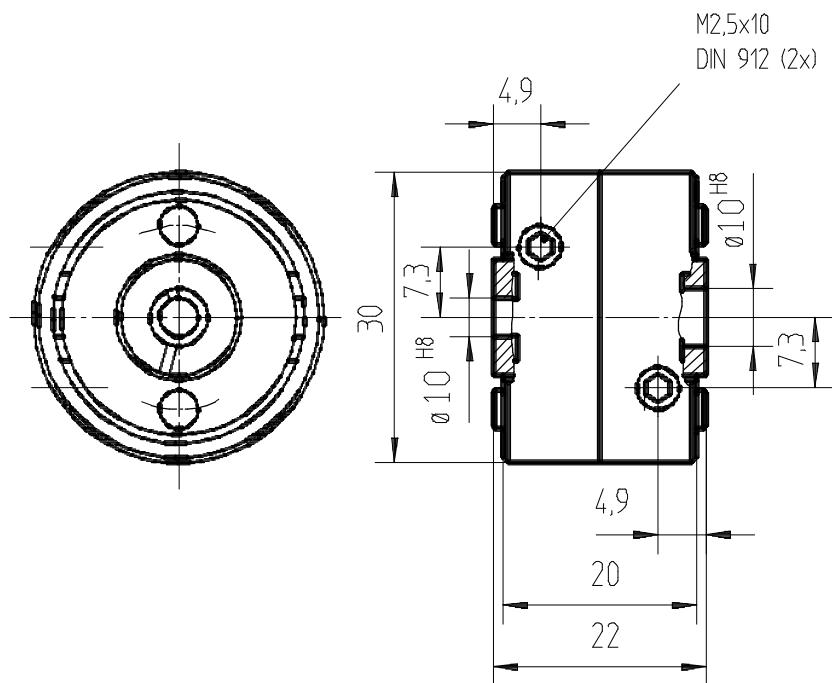

3.2. The shaft couplings WK/K/10-10

3.2.1. Technical data

Outer diameter	20mm
Length	29,5mm
Clamp screw	M 2,5
Standart torque	1,94 Nm
Valid radial shift.....	+/- 0,13 mm
Valid axial shift	+/- 0,8 mm
Valid angular misalignment.....	+/- 1 Grad
Torsion stiffness.....	31,5 Nm/rad
Valid torque	28000 min ⁻¹
Weight.....	20 g

3.3. Isolting springdisks - shaft coupling type: WK/D/10-10

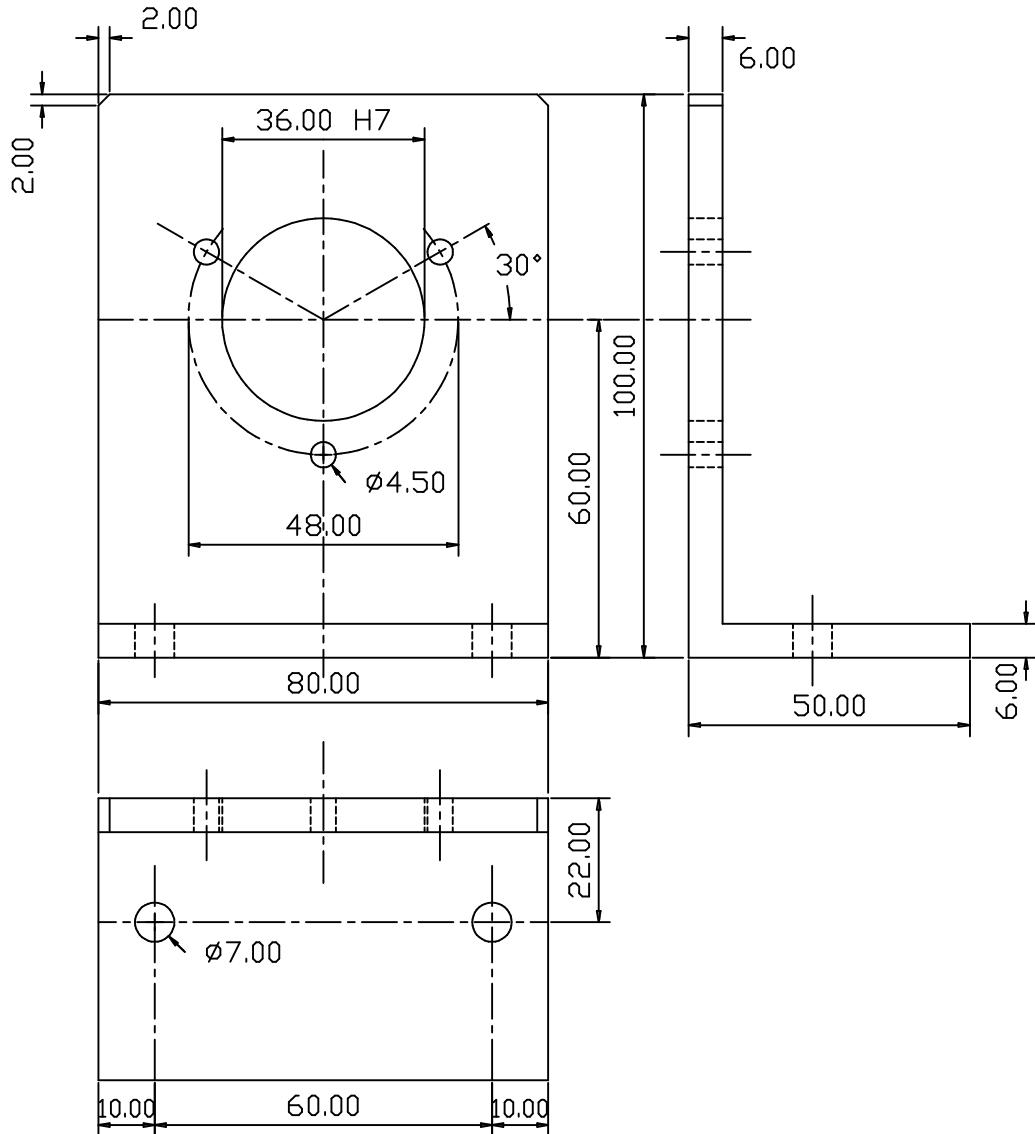

3.3.1. Technical data

Outer diameter 30 mm
Length 22 mm
Clamp-screw M2.5
Nominal torsial moment 40 Ncm
Acceptable radial shift +/- 0.4 mm
Acceptable axial shift +/- 0.4 mm
Acceptable angle-shift +/- 2.5 Grad
Torsions strength 90 Nm/rad
Acceptable rotation speed 12000 U/min
Weight ca. 23 g

4. Clamping

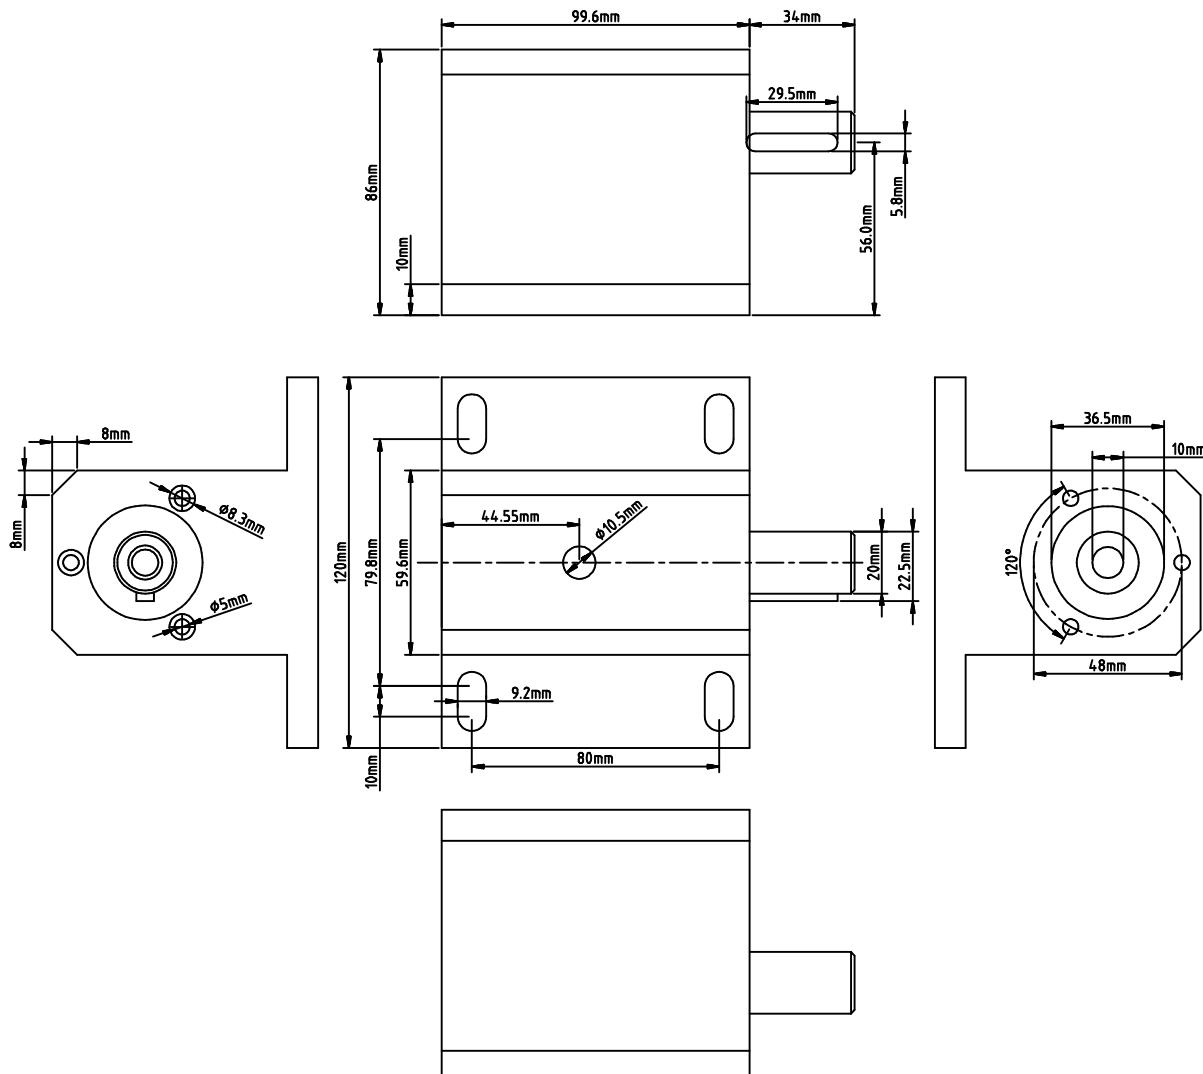

4.1. Angle flange type: WF/AG

4.1.1. Technical data

Suitable for..... AAG60007, AAG612, AAG626, AAG66107,
AAG615 and ADG60 i.e. all turn-angle-encoder
with 48 mm partial circle, 36 mm flange and 10 mm
shaft.
Clamping of the turn-angle-encoder by three DIN 912 M4x12mm screws.
Weight..... approximately 180g.

4.2. Bearing trestle: LAG60

4.2.1. Technical data

Suitable for	AAG60007, AAG612, AAG626, AAG66107, AAG615 and ADG60 i.e. all turn-angle-encoder with 48 mm partial circle, 36 mm flange and 10 mm shaft.
Acceptable rotation speed.....	3000 U/min.
Shaft drive	20mm with closed shaft notch.
Shaft drive	10mm to the turn-angle-encoder with shaft coupling WK/K/10-10.
Bearing.....	2 pieces, maintenance free groove - ball bearings.
Clamping of the turn angle encoder	by 3 DIN 912 M4x40mm screws.
Weight.....	approximately. 1.5kg.
